
Jolly Keys Program

Introducing music as a language.

Music is already imbedded in your child's life, now it's the time for him or her to appreciate it more fully, enjoy it and begin to make it. Our philosophy is to make learning music a discovery of sounds all around us and within ourselves.

In this program children will:

Explore Sound. Singing with nice voice, matching it to the tune.

Explore Music Movements. Getting to know rhythm patterns using hand gestures and simple instruments

Have Fun. Learning through educational music games.

Explore Keyboard. Learning to play simple songs on the piano keyboard

Stretch their attention span. Stretching attention span is a big advantage young musicians get out of the sessions through listening to the music pieces and other activities.

Develop Imagination. Developing imagination and ability to express themselves through discussing and sharing.

At the end of this course we want our young students to:

- Sing on key
- Have a concept of High and Low in music (pitch)
- Recognize and project few rhythm patterns
- Hear music as happy or sad (mood); loud or quiet (dynamic); song, march or dance (genre)
- And most of all - express an interest in learning performing music
